

Figure 1: Schematic representation of the experimental design. The diagram illustrates a sequence of steps in a word recognition task. It starts with a stimulus (a word) being presented to a subject. The subject then responds (presses a key). The response is recorded, and the system compares the response to the correct answer. Feedback (correct/incorrect) is provided to the subject. The process then repeats for the next stimulus. The diagram is labeled 'Figure 1' and 'Schematic representation of the experimental design'.
